

What is **Babytime**™?

BABY TIME™ is an individual medical diagnostic device that helps a woman accurately identify fertile days during her menstrual cycle. Increased levels of estrogen hormones during fertile days can be seen in the dry saliva sample as a "fern leaves". During an infertile period, dots or pebble like patterns in dried saliva are shown on a microscope slide.

The science behind **Babytime**™

The phenomenon of the saliva crystallization (the fern phenomenon) as been known ever since 1957 when discovered by the Italian gynecologists Andreoli and Della Porta of the University of Turin. They discovered that the level of estrogen could be detected through visual observation of a dried saliva sample on a microscope slide. It has been confirmed afterwards by many published papers and world wide applied clinical examinations.

This Mini Ovulation Microscope has been tested in prominent Medical Institutions in Europe for its reliability.

For whom is **Babytime**™ intended?

1. For women who want to determine fertile and infertile days in their menstrual cycle
2. For women who want to determine the ovulation day which is important in cases of secondary sterility
3. For women just entering their maturity, who need to monitor potential irregularities in their fertility cycle
4. For women in menopause who want to diagnose the menstrual cycle disorders.
5. For women who want to diagnose the regular cycle re-establishment and the first ovulation after delivery and some monthly cycle disorders
6. For couples who wish to lead their intimate life without stress
7. For women who do not want to use chemical contraceptive means and run the risk of their harmful effect

The Benefits of **Babytime**™

Easy to use

- Convenient saliva test (no messy urine tests)
- Lipstick sized, portable & self-contained
- Can be used anytime, anywhere
- Simple and non-invasive
- Natural and safe

Fast and Accurate

- Detect ovulation 3 to 4 days in advance
- Results displayed within minutes
- Over 98% accurate

Value

- Re-usable month after month (no expiry date)
- No special maintenance required
- 3 year manufacturer's guarantee (conditions apply)

Babytime™

Mini microscope for ovulation cycle observation

Pinpoint Ovulation.

Welcome to natural & effective family planning.

This *mini microscope* allows you to accurately detect your fertile days based on the image of your saliva.

Forget messy urine tests, temperature charts and doctor visits.
